

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	SWTID-2026-9223
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement: The current IT procurement process lacks automation, so configuration tasks for standard laptop orders are created and assigned manually, causing delays, oversight and user frustration.

How might we automatically create and assign configuration tasks for approved standard laptop orders so that laptops are ready promptly on arrival with minimal manual effort?

1 Define your problem statement

How might we automatically create and assign configuration tasks for approved standard laptop orders, so laptops are ready promptly on arrival with minimal manual effort?

PROBLEM

How might we automate task creation and assignment for standard laptop configuration in ServiceNow?

Team gathering & goal

A Team gathering

IT procurement team, hardware team, ServiceNow admin and end-user representative

B Set the goal

Remove manual hand-offs between laptop approval and laptop configuration

C Facilitation tools

Flow Designer, Service Catalog and Catalog Task for the solution discussion

Time: 10 min to prepare | 1 hour to collaborate | Participants: 4 recommended

Key rules of brainstorming

- ☐ Stay in topic.
- ☐ Encourage wild ideas.
- ☐ Defer judgment.
- ☐ Listen to others.
- ☐ Go for volume.
- ☐ If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement. (10 minutes)

Person 1 (IT Procurement)

Auto-create Catalog Task after approval	Pre-fill short description: Laptop needs to be configured

Person 2 (Hardware Team)

Auto-assign task to Hardware group	Task visible in hardware queue on arrival

Person 3 (ServiceNow Admin)

Use Flow Designer, Service Catalog trigger	Attach flow to Standard Laptop item (Process Engine)

Person 4 (End User)

Notify me when laptop is configured	Show status of config in request

3 Group ideas

Cluster similar ideas and give each cluster a sentence-like label. (20 minutes)

Automate task creation

Auto-create Catalog Task after approval	Pre-fill short description
---	----------------------------

Route work to the right team

Auto-assign to Hardware group	Task in hardware queue
-------------------------------	------------------------

Connect flow to the catalog

Flow Designer, Service Catalog trigger	Attach flow to Standard Laptop item
--	-------------------------------------

Keep users informed

Notify when laptop is configured	Show config status in request
----------------------------------	-------------------------------

Step-3: Idea Prioritization

4 Prioritize

Place ideas on the grid by importance and feasibility. (20 minutes)

Prioritization outcome: The highest-priority ideas (high importance, high feasibility) are auto-creating a Catalog Task after approval, auto-assigning it to the Hardware group, attaching the flow to the Standard Laptop catalog item, and pre-filling the short description. These form the Flow Designer solution (Standard Laptop task). User notifications and status visibility are planned as follow-ups, and vendor auto-ordering is deferred as low feasibility.
