

Customer Journey Map

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

SCENARIO	ENTICE	ENTER	ENGAGE	EXIT	EXTEND
Requesting, approving, configuring, and completing a Standard Laptop order	Need Identified How does the employee initially become aware of the process?	Request What does the employee experience as they begin?	Approval & Automation What happens in the core moments?	Configuration What does the employee/IT team experience as it finishes?	After Completion What happens after the experience is over?

JOURNEY DIMENSION	ENTICE Need Identified	ENTER Request	ENGAGE Approval & Automation	EXIT Configuration	EXTEND After Completion
□ Steps	Identify laptop need and find IT procurement route.	Open ServiceNow → Service Catalog → Hardware → Standard Laptop.	Request becomes Requested Item → approval → Flow Designer runs after approval.	Catalog Task is created and assigned to Hardware → laptop is configured.	Request/task is completed; employee receives the configured laptop.
□ Interactions	Employee interacts with IT service information and ServiceNow.	Employee selects Standard Laptop, enters required information, and selects Order Now.	Requester/approver checks approval; Flow Designer creates the task automatically.	Hardware team opens the Catalog Task, updates task status, and configures laptop.	Employee receives the laptop; IT can review completed request/task history.
□ Things / Places / People	ServiceNow portal; employee; IT procurement/service desk.	Service Catalog; Standard Laptop item; request fom; requester.	Requested Item; approval record; approver; Flow Designer; IT procurement.	Catalog Task (SCTASK); Hardware assignment group; laptop; Hardware team.	Completed request/task record; employee workplace; IT support.
□ Goals & motivations	Help me know where to request a laptop and avoid manual follow-ups.	Help me submit the request correctly and know it was recorded.	Help me know the request is progressing and avoid delays after approval.	Help me get a configured laptop without manual task creation or assignment delays.	Help me confirm completion and know where the request history is stored.
□ Positive moments	A clear Standard Laptop option is available.	A defined ServiceNow request process makes submission straightforward.	Approval leads into an automated workflow instead of another manual handoff.	The task is automatically created with the required details and routed to Hardware.	The completed request provides traceability and a clear end state.
☹ Negative moments	Employee may be unsure which catalog item to select.	Incomplete or incorrect information can slow processing.	Approval waiting time can delay the request; manual post-approval work could add more delay.	Without automation, task creation or assignment could be missed or delayed.	Limited status visibility can lead to follow-up questions.
□ Areas of opportunity	Clearly label Standard Laptop and provide concise guidance.	Use required fields/validation to reduce incomplete requests.	Show approval status and trigger the next step automatically after approval.	Create Catalog Task automatically; set description to 'Laptop need to Configured'; Approval = Approved; Assignment Group = Hardware.	Keep request/task status and history visible; extend the same pattern to other standard IT equipment.

Project journey based on the defined ServiceNow Standard Laptop procurement workflow.
