

FINAL PROJECT REPORT

Streamlining IT Procurement Automating Standard Laptop Orders with ServiceNow Flow Designer

Project Platform: ServiceNow

Project Version: 1.0

Report Date: 02 October 2026

1. INTRODUCTION

1.1 Project Overview

The project, “Streamlining IT Procurement,” automates the processing of a standard laptop request in ServiceNow. The implementation uses Service Catalog and Flow Designer to create a Catalog Task automatically after the required approval condition is satisfied. The generated task is assigned to the Hardware assignment group, reducing the need for manual task creation and routing.

1.2 Purpose

The purpose of the project is to establish a repeatable ServiceNow workflow for standard laptop procurement. The intended process connects catalog request submission, approval, automated task creation, and Hardware assignment in one controlled flow.

2. IDEATION PHASE

2.1 Problem Statement

The project addresses the manual effort involved in processing standard laptop procurement requests. A standardized automation flow is required so that an approved laptop request can result in the appropriate fulfillment task without requiring a user to manually create and route that task.

2.2 Empathy Map Canvas

The completed Empathy Map Canvas from Phase 1 should be inserted or referenced here. This section is intentionally not recreated because the detailed contents of the team’s original Phase 1 artifact were not provided with the final-report inputs.

Reference artifact: Empathy Map Canvas.docx / Empathy Map Canvas.docx.pdf

2.3 Brainstorming

The completed brainstorming and idea-prioritization artifact from Phase 1 should be inserted or referenced here.

Reference artifacts: Brainstorming- Idea Generation- Prioritizaation Template.docx and BrainstormingTemplate.pdf

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

The team’s completed Customer Journey Map from Phase 2 should be inserted or referenced here.

Reference artifact: Customer Journey Map - Example.pdf

3.2 Solution Requirement

The solution requires a ServiceNow Standard Laptop catalog request to be processed through an approval-controlled automation. Once the request reaches the required Approved state, the automation should create a Catalog Task with the required description and assign it to the Hardware group.

3.3 Data Flow Diagram

The team’s completed Data Flow Diagram should be inserted or referenced here.

3.4 Technology Stack

Technology / Component	Purpose
ServiceNow	Platform used to implement and execute the procurement workflow.
Service Catalog	Provides the Standard Laptop catalog request entry point.
Flow Designer	Automates the post-request task creation process.
Process Engine	Associates the configured flow with the Standard Laptop Catalog Item.
Requested Item	Represents the submitted catalog request used by the flow.
Catalog Task	Represents the fulfillment task generated by the automation.
Hardware Assignment Group	Receives the generated laptop fulfillment task.

4. PROJECT DESIGN

4.1 Problem Solution Fit

The team's completed Problem-Solution Fit artifact from Phase 3 should be inserted or referenced here.

Reference artifacts: Problem - Solution Fit Template v1.docx / PDF and related Phase 3 files.

4.2 Proposed Solution

The proposed solution is a ServiceNow Flow Designer automation named "Standard Laptop Task." The flow uses a Service Catalog trigger and creates a Catalog Task for the Requested Item. The task description is configured as "Laptop needs to be Configured," and the assignment group is Hardware. The flow is associated with the Standard Laptop Catalog Item through Process Engine.

4.3 Solution Architecture

The implemented logical flow is:

User → Standard Laptop Catalog Item → Requested Item → Approval → Flow Designer → Create Catalog Task → Hardware

The completed Solution Architecture artifact from Phase 3 should also be inserted or referenced here.

Reference artifacts: Solution Architecture.docx / PDF

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The team's completed Project Planning Template and planning logic documents from Phase 4 should be inserted or referenced here.

Reference artifacts: Project Planning Template.docx / PDF and Planning logic.docx

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Performance/execution testing was documented for the implemented ServiceNow flow. The tested execution path covered Standard Laptop request submission, approval-to-flow execution, automatic Catalog Task creation, Hardware assignment, and task description verification.

Test ID	Scenario	Result	Measurement Status
PT-001	Standard Laptop request submission	PASS	Functional execution verified
PT-002	Approval-to-flow execution	PASS	Functional execution verified
PT-003	Automatic Catalog Task creation	PASS	Functional execution verified
PT-004	Catalog Task assignment to Hardware	PASS	Functional execution verified
PT-005	Catalog Task description	PASS	Functional execution verified
PT-006	Measured response-time benchmark	NOT MEASURED	No quantitative benchmark recorded

No response-time, throughput, or concurrent-user benchmark is claimed in this report because those quantitative measurements were not recorded in the supplied project evidence.

7. RESULTS

7.1 Output Screenshots

Insert the team's captured screenshots in this section. Recommended evidence order:

- 1. Flow Designer – Standard Laptop Task configuration.
- 2. Catalog Task action showing Requested Item, description, and Hardware assignment group.
- 3. Process Engine / catalog item association.
- 4. Standard Laptop catalog request submission.
- 5. Approval / Requested Item state.
- 6. Automatically generated Catalog Task.
- 7. Final Catalog Task showing Hardware assignment.

The final report should use the actual screenshots captured by the team rather than recreated or assumed images.

8. ADVANTAGES & DISADVANTAGES

8.1 Advantages

- Reduces manual creation of fulfillment tasks for the standard laptop request.
- Provides a consistent routing path to the Hardware assignment group.
- Connects approval status with downstream task creation.
- Uses ServiceNow-native Service Catalog and Flow Designer capabilities.
- Creates a repeatable process that can be demonstrated and tested.

8.2 Disadvantages / Limitations

- The current implementation is focused on the Standard Laptop request scenario.
- Quantitative performance benchmarks were not recorded.
- The process depends on the ServiceNow configuration, catalog item, approval state, and assignment group being correctly maintained.
- The report does not claim integration with external procurement or inventory systems unless such integration is added later.

9. CONCLUSION

The project implements a ServiceNow-based automation for Standard Laptop procurement. The configured flow connects the Service Catalog request with approval-controlled task creation and Hardware assignment. The documented execution path demonstrates how Flow Designer can standardize a repeatable procurement fulfillment step while reducing manual task handling.

10. FUTURE SCOPE

- Extend the automation to additional standard IT hardware categories.
- Add more detailed approval rules based on department, cost, or requester attributes.
- Integrate inventory or asset availability checks before task creation.
- Add notifications and status updates for requesters and fulfillment teams.
- Capture quantitative performance metrics such as execution time and throughput.
- Add reporting or dashboards for procurement request volume, approval status, and fulfillment progress.

11. APPENDIX

11.1 Source Code

Not applicable to the core implementation. The project is primarily configured within the ServiceNow platform using Service Catalog, Flow Designer, approvals, and catalog task configuration.

11.2 Dataset Link

Not applicable. The implemented workflow does not depend on a machine-learning dataset.

11.3 GitHub & Project Demo Link

12. PROJECT PHASE ARTIFACT CHECKLIST

Phase	Artifact / Deliverable	Status
-------	------------------------	--------

1. Ideation	Problem statement, Empathy Map, Brainstorming	Completed / team artifact to attach
2. Requirement Analysis	Customer Journey, Solution Requirements, DFD, Technology Stack	Completed / team artifact to attach
3. Project Design	Problem-Solution Fit, Proposed Solution, Solution Architecture	Completed / team artifact to attach
4. Project Planning	Planning Logic, Project Planning	Completed / team artifact to attach
5. Project Development	UAT and Performance Testing	Completed
6. Project Documentation	FSD Documentation and Final Report	Final Report completed
7. Demo Video	Project demonstration	To be finalized / link to add
